- TRUST
- CULTURAL AUTHORITY

PRE-SEED // BERLIN, GERMANY
FEBRUARY 2026

Your longevity, daily.

CONFIDENTIAL

[01] THE INSIGHT

The Longevity Paradox

People who want to age well have been forced to become full-time project managers of their own health.

The majority of consumers now rank healthy aging as their top priority. Yet the average health-conscious person manages eight disconnected apps, three supplement subscriptions, and zero integrated guidance.

Longevity is no longer inaccessible. It is overwhelming. Consumers are not struggling to find options -- they are struggling to decide what is worth trusting, combining, and repeating. The problem is not lack of supply. It is lack of intelligent selection.

People became project managers of their own health. Every abandoned Oura ring, cancelled CGM subscription, and unopened wellness app represents a person who cared enough to try and was handed a dashboard instead of direction. These are not lost users. They are our addressable market.

THE FRAGMENTED STACK

Wearable sub	€10/mo
Meditation app	€15/mo
Supplements	€40/mo
Gym membership	€50/mo
Recovery session	€60/mo
Bloodwork panel	€80/test
Health apps (3-5)	€15-50/mo
CGM tracking	€199/mo

€126-295/mo across 6-8 disconnected providers. No integration. No coherence.

WHY THIS MATTERS NOW

Three forces converging

The graveyard of preventive health startups holds a clear lesson: people do not pay to prevent disease they cannot feel. But they will pay to feel better today. We sell how you **feel** today, not disease prevention tomorrow.

We experienced this ourselves. Two founders spending hundreds of euros a month on disconnected tools, wearables, and supplements -- with no integrated view of whether any of it works. The first brand to structure this behavior will define the category.

Euromonitor 2025 / McKinsey Future of Wellness 2025 / OECD Health at a Glance 2025 / Destatis 2023 / AppsFlyer Health App Retention Benchmarks 2024

[02] WHO WE SERVE

Longevity for people who actually live.

Not the 1% who cold-plunge at 5 AM. The millions who care about aging well but have been given fragmented tools that deliver data without direction.

PRIMARY PERSONA

Mi

THE REBUNDLING OPPORTUNITY

€126-295
PER MONTH, FRAGMENTED
ACROSS 6-8 PROVIDERS

→

€49-99
PER MONTH, INTEGRATED
ONE PLATFORM

We are not creating new health spending. We are consolidating fragmented budgets into a single integrated relationship -- at a lower price point with better outcomes.

WHY BERLIN

The ecosystem is forming here.

Berlin has the highest concentration of health-conscious expats in DACH, a 15-20% English-speaking population matching alche's content language, and lower operational costs that extend runway. The Biohackers Berlin Meetup alone has 2,213 members.

800K	15-20%	2,213
RESIDENTS AGED 25-45	ENGLISH-SPEAKING POPULATION	BIOHACKERS BERLIN MEETUP MEMBERS

MARKET VALIDATION

27% of Germans are willing to pay out-of-pocket for health apps (SpringerMedizin). Berlin tech worker median salary: **EUR 75,000 gross** (GfK). The purchasing power and willingness to pay for curated health experiences are already proven in this market.

SpringerMedizin 2024 / GfK Purchasing Power Study 2024 / Biohackers Berlin Meetup / Berlin Partner / DSSV 2024

[03] THE MARKET

The European longevity market is forming now.

No integrated player exists. That changes within 12-18 months.

THE GERMAN HEALTH PARADOX

Germany spends nearly **EUR 495 billion** on healthcare annually (12.3% of GDP) -- the highest in the EU. Only **4.8%** goes to prevention. With 7.7 hospital beds per 1,000 people (OECD average: 4.2), the system was architecturally built to treat illness, not prevent it. Consumers are filling the gap themselves.

COUNTRY	HEALTH SPEND (% GDP)	LIFE EXPECTANCY	GAP
Germany	12.3%	81.1 yrs	#1 spend, below 5 cheaper systems
Switzerland	11.3%	83.4 yrs	+2.3 yrs, spends less
France	12.1%	82.2 yrs	+1.1 yrs, spends less
Japan	11.5%	84.5 yrs	+3.4 yrs, spends less
OECD avg	9.3%	80.3 yrs	

MARKET SIZING

TAM / SAM / SOM

OECD Health at a Glance 2025 / Destatis 2023 / GWI 2024 Global Wellness Economy Monitor

EUROPEAN ADVANTAGE

Not behind -- structurally different.

[04] COMPETITIVE LANDSCAPE

We mapped the terrain.

30+ companies analyzed. The integrated European longevity platform does not exist yet.

COMPANY	POSITION	SCALE	GAP
Oura	Wearable ring. 5.5M sold, 2M subscribers. Acquired Veri (CGM).	$11B	No lifestyle layer
Hims	Telehealth + DTC. Distribution-first, not community-led.	$2.3B rev	No integration
ZOE	Nutrition AI. Science + warmth. UK-based, nutrition-only.	~$100M rev	Single vertical
AG1	Content-first supplements. $600M revenue, profitable.	$600M rev	No data layer

Oura tells you your sleep score. It does not help you fix it. Each competitor does a piece. Nobody connects data to action to product to community -- especially in Europe.

> *"We studied $1.4B in failures so we could build differently."*

THE WINDOW

12-18 months before well-funded incumbents integrate European longevity protocols.

Oura has not localized beyond hardware retail. Hims EU expansion is nascent. Levels and Function Health are US-only. Neko Health (Spotify founder) focuses on scanning, not integrated wellness. The full-stack European longevity platform is wide open.

[05] THE SOLUTION

The Solution

A longevity lifestyle platform that integrates biomarker tracking, personalized protocols, curated products, and community into one membership.

We designed alche around a single thesis: longevity tools fail not because the science is wrong, but because nobody connects the dots. Testing companies identify problems and send users away. Supplement brands sell products without context. Fitness platforms track data without direction. The integration is the product.

THE ARCHITECTURE

Four layers, each feeding the next.

Each layer generates data that informs the next. The architecture is the structural reason alche can personalize at scale while single-vertical competitors cannot.

01

Biomarker Layer

Blood panels, CGM glucose data, wearable metrics (sleep, HRV, activity). Longitudinal tracking -- six months of data is 6x more valuable than a single snapshot.

02

Protocol Layer

Personalized plans generated from biomarker data, goals, and lifestyle context. AI-guided, physician-informed. Calibrated to individual biology and refined as new data arrives.

03

Product Layer

Curated supplements, functional products. Not manufactured by alche -- curated and sold through the platform. Protocol-linked: recommended based on the user's data, not a generic catalog.

04

Community Layer

Accountability circles, shared challenges, event networks. Community is not a feature -- it is a longevity intervention itself. People with strong social connections have a 50% greater chance of longevity.

DESIGNED FOR DATA REALITY

Only **8% of EU consumers** share health data with third parties (BEUC). We designed for this reality: GDPR-native architecture, transparent data policies, user-controlled sharing. In a market where trust is the scarcest resource, privacy-first design is a competitive advantage, not a compliance cost.

The architecture is invisible to the user. What they feel is this: they track their health, receive guidance that makes sense, access products that are actually relevant to them, and belong to a community of people on the same journey. It feels simple. The integration underneath is what makes it work.

BEUC Health Data Survey 2024 / Blue Zones / American Journal of Lifestyle Medicine / WHOOP 2025 Retention Data / Fitzgerald et al. 2021, Aging

[06] THE PRODUCT

What Users See and Do

The app is the operating system. The physical space is the proof of concept. Every interaction feeds a single closed loop.

USER JOURNEY

One visit, fully connected.

01

Choose Your Outcome

User selects their primary goal from five outcome categories. This determines protocol templates, product recommendations, and content feed. One tap, one direction. Everything aligns.

MVP

02

Book an LED Session

Real-time seat availability in 20-minute slots. Two types: Glow (red light) and Recovery (near-infrared). During booking, the app suggests a smoothie + boost combo matched to the session.

MVP

03

Customize Your Potion

Six signature Alche Potions (€7-11) with five functional boost add-ons (+€2 each), mapped to outcome categories. Pre-ordered during booking, ready on arrival. Target average ticket: €11.

MVP V1: PROTOCOL-LINKED

04

Check In. Session. Track.

QR check-in on arrival. Potion ready, seat ready -- zero wait. Post-session: log how you feel, earn a milestone. This creates the behavioral data that powers personalization in V1.

MVP

05

Shop by Outcome

Own-brand blends, capsules, curated third-party products -- organized by what you want, not by ingredient. The boost you loved in your smoothie? Buy the pouch to take home.

MVP: CATALOG V1: SMART REPLENISHMENT

06

Community and Events

Wellness events, science talks, researcher sessions. Event RSVP, ticket purchase, member-exclusive access. Every event simultaneously strengthens community and generates revenue.

MVP

MEMBERSHIP

Four tiers, credit-based.

PRODUCT ROADMAP

MVP is the skeleton. Intelligence comes later.

PHYSICAL SPACE = PHASE 2

The Berlin flagship in Mitte is where the digital meets the physical: LED sessions, functional smoothies, curated products, community events. It operates near breakeven standalone, generates €8,800-11,700/month in subscriber LTV through walk-in conversions, and creates the environmental cues that bridge the 66-day habit formation gap digital-only tools structurally cannot.

RevenueCat 2025 Benchmarks / Baumel et al. 2019, JMIR / Lally et al. 2010, European J. Social Psychology / Stripe Integration Docs

[07] BUSINESS MODEL

Business Model

Subscription-first digital platform. Physical space drives acquisition. Path to break-even at Month 12.

Core	**€19**	Biomarker dashboard, wearable sync, basic protocols	85-90%
Pro	**€49**	Personalized protocols, AI insights, advanced tracking	85-90%
Premium	**€99**	Blood panel credits, 1:1 reviews, exclusive events, CGM (Phase 2)	70-85%

REVENUE COMPOSITION

Subscription share grows from ~52% to ~68%, shifting valuation toward SaaS-adjacent multiples (8-15x ARR) vs. premium retail (2-4x revenue).

CONVERSION

Subscriber funnel at Month 12

UNIT ECONOMICS

MARGINS

Gross margin by revenue stream

PATH TO BREAK-EVEN

24-month runway with €500K raise. Pre-launch burn: €7,600/month. Break-even achieved through a combination of ~145 paying digital subscribers and ~€10,000/month in physical space revenue (products, services, events). Even at €400K raise, the model reaches break-even with a €42K buffer.

RevenueCat 2025 State of Subscription Apps / Industry churn benchmarks (Recurly, Baremetrics) / DSSV 2024 / Stripe Payment Infrastructure

[08] GO-TO-MARKET

Build the audience before the product.

Content-first. Community-first. The product comes to people who already trust the voice.

Most startups spend money to find customers. We find customers for free, then spend money to build what they already want. Our content-first strategy trades founder labor for capital: every video, newsletter, and community event builds an audience that converts directly into our waitlist, then our founding members, then our recurring revenue.

TWO FLYWHEELS, SEQUENCED

CHANNEL STRATEGY

PRIMARY: SHORT-FORM VIDEO

TikTok + Instagram Reels -- @alche.space

Radical honesty science content. 3-5 posts per week. Pattern-breaking format: first piece is a collagen deep dive across 23 studies showing only industry-funded research is positive. This IS the brand voice.

SECONDARY: NEWSLETTER

Weekly email -- Substack or Beehiiv

One deep dive per week. Captures emails -- the only owned asset. Social algorithms change; email lists compound. Where the most engaged followers live and conversion happens.

AMPLIFIER: YOUTUBE

Monthly "Alche Reviewed" long-form

10-20 minute deep research episodes. Evergreen SEO pillars that rank in search for years -- the moat no short-form competitor builds.

AMPLIFIER: BERLIN EVENTS

Quarterly "Alche Salon" -- EUR 200-500/event

Science talks over wine at existing Berlin venues. One evening generates a month of content. Doubles as customer discovery. Biohackers Berlin meetup (2,213 members) is the warm audience.

EXECUTION ROADMAP

12 months to product-market fit.

Q1 M1-3

Foundation

PRE-FUNDING // EUR 0 BUDGET // CONTENT ENGINE IGNITION

- Launch @alche.space. 3-5 short-form videos per week, honest science format.
- Launch newsletter (Week 2). Goal: 300 subscribers by end of Q1.
- 10 informal customer discovery conversations from social DMs and meetup contacts.

Q2 M4-6

Traction Proof

PRE-FUNDING // EUR 200-500 EVENTS // WAITLIST OPENS

- First Alche Salon event. 30-40 people. Film everything -- one event produces 3-4 weeks of content.
- Open waitlist landing page. Goal: 500 signups from newsletter + social + events.
- Begin GmbH formation. Apply to GruendungsBONUS Plus (EUR 50K non-dilutive Berlin grant).

Q3 M7-9

Fundraise + Build

FUNDING CLOSES // EUR 500K RAISE // MVP DEVELOPMENT BEGINS

- Pitch with real numbers: followers, newsletter subs, waitlist, event attendees.
- Post-funding: hire technical co-founder / dev lead. Begin MVP development.
- Events scale to monthly with 60-80 attendees.

Q4 M10-12

Beta Launch

POST-FUNDING // PRODUCT IN HANDS // FOUNDING MEMBERS

- MVP beta to first 50-100 users from waitlist. Founding member pricing: EUR 19/month, locked for life.
- Content evolves to include product teasers, beta user stories, "building in public" updates.
- Physical space search begins. Berlin location planning for hybrid model proof.

TARGET METRICS BY QUARTER

	Q1	Q2	Q3	Q4
Social followers	1-2K	3-5K	8-12K	15-20K
Newsletter subs	300	1,000	2,500	5,000
Waitlist signups	--	500	1,500	(converts)
Event attendees	--	35	250	500+
Paying users	--	--	--	**50-100**
Content CAC	**€0***	**€0***	**€0***	**€0***

*EUR 0 paid acquisition. Content cost is founder labor, not capital.

Biohackers Berlin Meetup / GruendungsBONUS Plus Program / RevenueCat 2025 Benchmarks

[09] TRACTION

What we have done with zero capital.

Pre-seed means pre-product. What matters is proof of thinking, proof of market understanding, and proof that the founders can execute before a single euro arrives.

35+	30+	$1.4B
RESEARCH SESSIONS COMPLETED	COMPANIES ANALYZED	IN FAILURES STUDIED

CONTENT ENGINE

The flywheel is in motion.

The content-first GTM strategy is not a plan -- it is executing. The first content pieces are being produced: a collagen deep dive across 23 peer-reviewed studies (separating industry-funded from independent results), supplement evidence tiers, and honest longevity protocol reviews. The brand voice is being built in public, with zero marketing spend.

MARKET VALIDATION SIGNALS

THE COMMUNITY IS FORMING WITHOUT US

r/Biohackers has grown 26x since 2021 to 711,000+ subscribers. r/longevity has 163,000+ members. Biohackers Berlin meetup: 2,213 members and growing. Reddit longevity VC investment hit $8.49B in 2024 (2x year-over-year). The demand for curated, integrated longevity guidance is not a hypothesis -- it is measurable, growing, and currently unserved by any integrated European platform.

> *"We are not waiting for funding to start. Your investment does not start the engine -- it builds the product this audience is already asking for."*

Reddit community metrics, Feb 2026 / Biohackers Berlin Meetup / Longevity.Technology 2024 Funding Report

[10] THE MOAT

We do not claim a moat. We have a thesis about what compounds.

At pre-seed, no moat exists yet. What investors evaluate is whether the model has the structural potential to build one.

WHAT AI CANNOT REPLACE

If Apple Health + ChatGPT gives personalized longevity advice for free, the pure data-and-insights layer is commoditized. What survives: **physical experiences** (AI cannot give you a smoothie or a community event), **social identity and belonging** (people join for community, not because the algorithm is optimal), **accountability and motivation** (knowing what to do is not the hard part -- doing it consistently is).

INTEGRATION IS THE THESIS

None of alche's competitors combine biomarker data + personalized protocols + curated products + physical experiences + community in one platform. They each do one or two layers. Integration is structurally hard to bolt on because it requires different organizational DNA than single-vertical excellence. GDPR-native data trust gives a European entrant a structural advantage US platforms cannot retrofit. When the data layer gets cheaper and AI interpretation improves, the companies that built genuine community, cultural identity, and regulatory trust are the ones still standing.

Competitive analysis: 30+ companies, Feb 2026 / Blue Zones / WHOOP 2025 Retention Data / Fortune Business Insights 2025

[11] THE TEAM

Two founders. One gap. A plan to close it.

Brand, growth, operations, and medical expertise -- covered. The CTO gap is flagged honestly: funding unlocks this hire.

PHOTO

Timur Tasdogan

CO-FOUNDER AND CMO -- 49% EQUITY -- FULL-TIME

Quantitative thinker who builds brands. MSc Data Science (GISMA Berlin), BA Economics (Koc University, merit scholarship). Owns data, brand, and growth at alche.

Concentrix (for Meta) Consulting
EUR 1.8M ad spend across 390+ advertisers. Avg ROAS improved from 1.5x to 2.7x.

Hepsiburada NASDAQ: HEPS
EUR 300K performance budget, 4x ROAS. Influencer campaigns: 29M views.

TOM / Hadi App Consumer
Co-led marketing for app that reached 10M+ users.

Quantpaper Pre-Seed
Founding team. 30 user interviews, 27% activation rate lift.

PHOTO

Daria Dijan Roth

CO-FOUNDER AND COO -- 51% EQUITY -- FULL-TIME

Systems thinker who ships. BSc Computer Engineering + BA International Business. Built production backend systems. Four-year autoimmune journey turned domain expertise. Established figure in longevity and wellness topics. Owns vision, operations, market analysis, and competitive intelligence at alche.

Jan Iletisim Teknolojileri Software
Backend development and product architecture. Production systems serving real users.

MUTA-1 Reklamcilik Agency
Brand positioning and performance marketing. Acquisition and retention funnel design.

EXTENDED TEAM

PHOTO

AmirFarzam Kamalpour

TECHNICAL LEAD

Self-taught developer since age 12. Runs Star Digital (stardigital.ir) -- IT infrastructure, hosting, web and app development. Previously at Jung von Matt HAVEL (Berlin) in IT and web development. Brings existing server infrastructure to the alche build.

THE CTO GAP -- HONEST FRAMING

The team has technical capability through AmirFarzam's infrastructure and development experience. What we need is a dedicated technical co-founder or lead for the full platform build. The founding team has technical literacy (BSc Computer Engineering, MSc Data Science) to evaluate candidates, scope work, and manage the build -- but we need a dedicated technical leader to own the product engineering. This is the first hire the raise enables.

PHOTO

Shukri Jarmoukli

MEDICAL ADVISOR -- PHYSICIAN

Studied Medicine at Universitaet zu Koeln. Runs Lifestyledoctor, a self-pay longevity practice in Berlin. Specializes in functional medicine, psychoneuroimmunology (KPNI), CGM biofeedback, and biomarker-driven protocols. His patients -- entrepreneurs investing in proactive health out of pocket -- are alche's exact target demographic. Role: protocol design validation, medical content review, biomarker interpretation, EU regulatory compliance.

GOVERNANCE

Structure

ENTITY	Alche GmbH (formation in progress) -- Berlin
EQUITY	Daria 51% / Timur 49%
DOMAINS	Timur: brand, data, growth // Daria: vision, architecture, ops // Shared: product
RESIDENCY	Both founders: Turkish citizens, long-term Berlin residents. No visa risk.
HISTORY	10-year personal friendship. Not a networking match.
FIRST HIRE	Technical co-founder / dev lead (funding-dependent)

[12] THE ASK

EUR 500,000 to build the category.

Convertible loan (Wandeldarlehen). 24-month runway. Break-even at Month 12.

WHAT EUR 500K UNLOCKS

THE INVESTOR EQUATION

Zero European competitors in integrated longevity lifestyle. A 12-18 month window before US players localize. EUR 500K buys 24 months of runway, break-even at Month 12 with a EUR 142K buffer, and a founding team that has already done the research depth of a Series A company. What is missing is execution capital. That is exactly what this raise is for.

[13] CLOSING

The ambition.

Berlin is the proof. Europe is the unlock.

THE ENDGAME

The longevity lifestyle platform for all of Europe.

What Aesop did for skincare -- took something technical and made it beautiful, accessible, and identity-forming. That is what alche does for longevity.

FROM HERE TO THERE

PHASE 1 // M0-12

Berlin proof of concept

App launch. One physical space in Mitte. 145 paying subscribers. Break-even on unit economics. Content flywheel spinning. Community density forming.

PHASE 2 // M6-18

Digital expansion across EU

Open app beyond Berlin. Ship products across the EU. Partner with existing wellness spaces. Prove digital-only members retain without a physical node.

PHASE 3 // M12-24

Second location + seed round

Second Berlin location where digital density is highest. Pop-ups before permanent. Seed round at EUR 2M+ MRR trajectory.

PHASE 4 // M18-36

Platform maturity

Open API for partner integrations. Corporate wellness tier. Expand category presence across EU.

> *"Longevity should not be solely for tech bros of Silicon Valley. It should be for everyone who wants to live better, not just longer."*
>
> Community sentiment -- r/Biohackers, r/Longevity, r/Supplements // 711K+ members
